Heraeus Kulzer introduces extended use for cara YantaLoc® LV

Less is more: de nieuwe Lage Versie met gereduceerde hoogte.

Haarlem, 31 juli 2016 – cara YantaLoc®'s space-saving construction has been offering plenty of freedom for prosthesis design for the past year. And now with the new cara YantaLoc® LV, with its reduced dimensions for the titanium base and retaining element, Heraeus Kulzer offers even greater freedom for technical design.

cara YantaLoc® is a screw-fit titanium base with an angled zirconia retainer featuring an integrated locator function. It was designed to securely, simply and flexibly fix removable dental restorations to implants – even where space in the patient's mouth is restricted. The new Low Version, cara YantaLoc® LV, now provides dental technicians and dentists with even more freedom: the amount of space required can be significantly reduced thanks to the lower height of 4.00 mm and a gingival margin of 1-2 mm. For comparison: the lowest version previously available had a height of 6.5 mm and a gingival margin of 1-3 mm.

Flexible use

Like cara YantaLoc®, cara YantaLoc® LV is also available for all common implant systems and can be ordered in five different angulations from 0° up to 20°. For additional flexibility, the retainer can be rotated -60°, 0° or +60° to the implant position. This makes it easier to compensate divergent implants and achieve an optimum insertion direction. The retainer is also made of hygienic and durable zirconium dioxide and offers many benefits, such as excellent soft tissue integration and pseudoadhesion of the gingiva. A further advantage: less plaque and reduced bacterial deposition compared to alloy designs. The natural tooth colours make it easy to design aesthetic solutions.

According to dental technician Otmar Siegele and Dr Thomas Jehle, the developers of YantaLoc®: "In complicated cases in particular, every millimetre counts – the new Low Version is therefore the next logical step for even greater freedom in prosthesis design." The new Low Version (LV) is now available from Heraeus Kulzer.

Users in Germany can order directly via the free order hotline on 0800 437 25 22; customers in Austria can order via the customer support hotline on 0800 437 233.
